

Dear Patient:

While continuing to provide up-to-date, state-of-the-art women's medical diagnostic testing in a safe and comfortable setting, the staff of world class physicians at Great Neck Women's Medical Care is proud to announce the following new services and accomplishments.

- Osteoporosis screening with Dual Energy X-Ray Absorptiometry (DEXA), and consultation as requested.
- New GE 800T Senographe Mammography system with exclusive Automatic Optimization of Parameters (AOP). Full integrated technology and updated radiographic and ultrasound-guided cyst and fine needle aspiration biopsy.
- Our facility has received its third consecutive accreditation by the American College of Radiology (ACR, FDA-MQSA).
- First of only two Long Island facilities to be accredited in ultrasound by the American Institute of Ultrasound in Medicine (AIUM).
- One of only a handful of facilities (including hospitals) to offer Saline Infusion Sonohysteroscopy (SIS), an improved, more reliable outpatient diagnostic test used to investigate post-menopausal or other abnormal vaginal bleeding, unexplained infertility and recurrent pregnancy loss. SIS is also very useful for the evaluation of the endometrium in patients using tamoxifen, or in patients with a thick, irregular endometrium identified by conventional sonography. It also has a role to play in pinpointing a localized abnormality in the uterus prior to performing a biopsy. SIS is ideal for identifying endometrial polyps, fibroids and synechiae. Endometrial hyperplasia and carcinoma are also demonstrated. The advantages of SIS are its minimal invasiveness, the high detail images it provides and the absence of radiation or the need for anesthesia.
- Ovarian Cancer Screening, including transvaginal sonography, color doppler imaging (and CA125, when requested).

*We thank you for referring others, and we appreciate your trust!*
