

## SURGERY TO HEIGHTEN A WOMAN'S SEXUALITY

For years we have been made aware of the benefits of male impotency drugs and enhancement surgery but, until recently, very little medical attention was directed to the physical and emotional aspects of female sexuality. Now, women are able to achieve sexual equality due to innovative vaginal surgeries, which are performed exclusively in New York City and Long Island at the Laser Vaginal Rejuvenation Institute of New York.

These relatively painless and bloodless procedures have been recognized in recent articles in The New York Times, Chicago Tribune, Newsday, New York Magazine, Vogue, Cosmopolitan, Elle, Harpers Bazaar, Crain's New York Business and the New York Post. I actually take more blood in pre-surgical testing from a patient than she loses during most surgeries.

I am one of only nine gynecological surgeons in America that is permitted to use these pioneering and effective trademarked surgeries. I was personally selected and trained by Doctor David Matlock, the pioneering developer of Laser Vaginal Rejuvenation®.

Candidates who come to me for the Laser Vaginal Surgeries include women whose vaginal areas have stretched due to pregnancy or aging; women who want to increase their sexual pleasure; women who want their labial lips reduced, enhanced or re-shaped; women who have experienced vaginal trauma; women whose vaginal size is not totally compatible with their partner; women who suffer from stress incontinence and women who want to reconstruct their hymen to its original form.

The various surgical procedures I perform at the Laser Vaginal Rejuvenation Institute of New York include:

### Laser Vaginal Rejuvenation®

This is an hour and a half laser procedure that effectively enhances vaginal muscle tone, strength and control during which I restructure the internal and external vaginal diameters. As Masters & Johnson first reported by increasing the frictional forces generated during intercourse, sexual gratification dramatically improved.

### Designer Laser Vaginoplasty®

Unfortunately, many women suffer silently because they are not pleased with their vaginal areas. As a result of natural conditions such as pregnancy, aging and trauma, women frequently have vaginal stretching or distortion, which makes them physically and emotionally unhappy. These trademarked procedures enable me to resculpt the vulvar structures and the labia lips to meet the aesthetic desires of each individual patient.

### Stress Urinary Incontinence

It is not a commonly known fact but more than 30 million American women suffer from the common and discomforting condition of bladder leakage. The problem occurs in every day activities such as exercise, cough-

ing, laughing, sneezing and sex. To control this embarrassing condition, women have been using pads or adult diapers. Now I can restore a woman's quality of life by easily repairing the condition at the same time as I perform Laser Vaginal Rejuvenation®.

Our mission at the Laser Vaginal Rejuvenation Institute is dedicated to empowering women with the knowledge and the choice to rejuvenate and amplify their sexual experiences. This new burgeoning trend for women to seek out ways to increase sexual gratification through Laser Vaginal Rejuvenation® has brought patients from all 50 states and 30 foreign countries.
